Specify Responsibly with ForestOne

ForestOne & EGGER: A new force in sustainable building décor

ForestOne takes sustainability seriously

ForestOne is the largest independent distributor of wood panels, timber and decorative surface products in Australia. We are an Australian-owned company with a strong focus on providing products that enable architects and designers to 'specify responsibly'.

What does 'specified responsibly' mean?

A sustainable building is the outcome of responsible material specification, which aligns the efficient use of resources with over-arching aims to reduce a building's impact on the environment during its lifecycle.*

Through responsible material selection, specifiers can minimize environmental impacts by reducing reliance on natural resources, using reclaimed & recyclable materials, avoiding materials with high embodied emissions, or by simply creating less waste.

Responsible specification also means the avoidance of materials that may have been produced through unethical practices, or otherwise pose a threat to human health and well-being.

Providing the best-in-class materials for responsible specification is the ForestOne mission; for this reason, we recommend the EGGER range of sustainably sourced decorative surface products.

Our partner in sustainability: EGGER

EGGER is committed to promoting sustainable construction and healthy living with their range of innovative wood-based décors.

By manufacturing in a closed material cycle and incorporating waste wood into their production processes, as well as sourcing from certified forests, EGGER supports responsible forestry and ensures compliance with legal & social standards. They also continually improve upon the environmental performance of their production processes, with a focus on new technology & renewable energy.

A trend leading range of wood-based décors

Combining the latest in design trend with an unmatched level of quality, EGGER decorative surfaces bring a beautiful aesthetic to any interior. The EGGER range includes versatile laminates, durable panels and easy-to-mount worktops, as well as the innovative Feelwood and PerfectSense finishes, for the most natural textures & high performance surfaces.
